

KOINONIA FEDERATION – ALL THROUGH SUBJECT MAP

SUBJECT: Computing

CURRICULUM INTENT: We want our pupils to develop an interest in the field of computer science by providing them with the knowledge, understanding and skills to support them in the fast-paced world of technology; while ensuring that they understand the potential dangers of modern technology, and are able to use it safely.

We aim for pupils to develop their ability to solve computational problems using a range of programming skills, consisting of both visual and textual programming languages. Our intent is to enable pupils to not only become confident users but creators of technology.

Please identify what the key themes / concepts are, that all students at all key stages will study in your subject.

These will obviously get progressively more challenging in terms of content / expectations as the years progress and different language might be used to describe them however, they should still be able to fit under a blanket heading.

Please allocate a colour to each of these themes so that it is clear how they are revisited and built upon throughout the curriculum. Please add or remove as appropriate

Programming Skills	Digital literacy and skills	Hardware/Software	Logic
--------------------	-----------------------------	-------------------	-------

KOINONIA FEDERATION – ALL THROUGH SUBJECT MAP

	AUTUMN 1	AUTUMN 2	SPRING 1	SPRING 2	SUMMER 1	SUMMER 2
NURSERY – KEY THEMES / CONCEPTS	Wider Technology			Computing Devices		
NURSERY – KEY CONTENT / LEARNING	Pupils will learn to operate mechanical toys, e.g., turns knob on wind-up toy or pulls back on a friction car. Pupils will learn how to operate simple equipment. Pupils will learn to use buttons to play back songs, sound recording or videos. Pupils will learn about real objects such as cameras and mobile phones and their basic functions.			Pupils will learn to use a single button mouse to drag and drop. Pupils will learn that text and images on a computer can be printed out. Pupils will learn to use arrow keys on a keyboard to control movement on the screen.		
RECEPTION - KEY THEMES / CONCEPTS	Wider Technology			Computing Devices		
RECEPTION - KEY CONTENT/ LEARNING	Pupils will learn to operate mechanical toys, e.g., turns knob on wind-up toy or pulls back on a friction car. Pupils will learn how to program a simple floor robot with a series of instructions. Pupils will learn how to use play, pause and stop buttons when playing back on recording devices.			Pupils will learn to use a single button mouse to drag and drop. Pupils will learn that text and images on a computer can be printed out. Pupils will learn to use arrow keys on a keyboard to control movement on the screen. Pupils will start to learn that the internet can be used for research purposes.		
YEAR 1 - KEY THEMES / CONCEPTS	Computing systems and networks	Creating Media	Programming A	Data and Information	Creating Media	Programming B
	Technology around us	Digital painting	Moving a robot	Grouping data	Digital writing	Programming animations
YEAR 1 - KEY CONTENT/ LEARNING	Pupils will be taught to recognise technology in school and how to use it responsibly.	Pupils will learn to choose appropriate tools in a program to create art and make comparisons to working non-digitally.	Pupils will write short algorithms and programs for floor robots and predict program outcomes.	Pupils will explore object labels, then using them to sort and group objects by their properties.	Pupils will use a computer to create and format text, before comparing to writing non-digitally.	Pupils will design and program the movement of a character on screen to tell stories.

KOINONIA FEDERATION – ALL THROUGH SUBJECT MAP

YEAR 2 - KEY THEMES / CONCEPTS	Computing systems and networks	Creating Media	Programming A	Data and Information	Creating Media	Programming B
	Information Technology around us	Digital Photography	Robot algorithms	Pictograms	Digital music	Programming quizzes
YEAR 2 - KEY CONTENT/ LEARNING	Pupils will identify IT and how its responsible use improves our world in school and beyond.	Pupils will capture and change digital photographs for different purposes.	Pupils will create and debug programs and use logical reasoning to make predictions.	Pupils will collect data in tally charts and using attributes will organise and present data on a computer.	Pupils will use a computer as a tool to explore rhythms and melodies, before creating a musical composition.	Pupils will design algorithms and programs that use events to trigger sequences of code to make an interactive quiz.
YEAR 3 - KEY THEMES / CONCEPTS	Computing systems and networks	Creating Media	Programming A	Data and Information	Creating Media	Programming B
	Connecting computers	Stop-frame animation	Sequencing sounds	Branching databases	Desktop Publishing	Events and actions in programs
YEAR 3 - KEY CONTENT/ LEARNING	Pupils will identify that digital devices have inputs and outputs. How devices can be connected to make networks.	Pupils will capture and edit digital still images to produce a stop-frame animation that tells a story.	Pupils will create sequences in a block-based programming language to make music.	Pupils will build and use branching databases to group objects using yes/no questions.	Pupils will create documents by modifying text, images and page layouts for a specified purpose.	Pupils will write algorithms and programs that use a range of events to trigger sequences of actions.
YEAR 4 - KEY THEMES / CONCEPTS	Computing systems and networks	Creating media	Programming A	Data and information	Creating media	Programming B
	The internet	Audio production	Repetition in shapes	Data logging	Photo editing	Repetition in games

KOINONIA FEDERATION – ALL THROUGH SUBJECT MAP

YEAR 4 - KEY CONTENT/ LEARNING	Pupils will recognise the internet as a network of networks including the WWW (World Wide Web). Learning why we should evaluate online content.	Pupils will capture and edit audio to produce a podcast, ensuring that copyright is considered.	Pupils will use a text-based programming language to explore count-controlled loops when drawing shapes.	Pupils will recognize how and why data is collected over time, before using data loggers to carry out an investigation.	Pupils will learn to manipulate digital images, reflect on the impact of changes and whether the required purpose is fulfilled.	Pupils will use a block-based programming language to explore count-controlled and infinite loops when creating a game.
YEAR 5 - KEY THEMES / CONCEPTS	Computing systems and networks Systems and searching	Creating media Video production	Programming. A Selection in physical computing	Data and information Flat-file databases	Creating media Introduction to vector graphics	Programming B Repetition in quizzes
YEAR 5 - KEY CONTENT/ LEARNING	Pupils will learn to recognise IT systems in the world and how some can enable searching on the internet.	Pupils will plan, capture and edit video to produce a short film.	Pupils will explore conditions and selection using a programmable microcontroller.	Pupils will learn to use a database to order data and create charts to answer question.	Pupils will create images in a drawing program by using layers and groups of objects.	Pupils will explore selection in programming to design and code an interactive quiz.
YEAR 6 - KEY THEMES / CONCEPTS	Computing systems and networks Communication and collaboration	Creating Media Webpage creation	Programming A Variable in games	Data and information Introduction to spreadsheets	Creating media 3D modelling	Programming B Sensing movements
YEAR 6 - KEY CONTENT/ LEARNING	Pupils will learn how data is transferred by working collaboratively online.	Pupils will design and create webpages, giving consideration to copyright, aesthetics and navigation.	Pupils will explore variables when designing and coding a game.	Pupils will learn to answer question by using spreadsheets to organise and calculate data.	Pupils will plan, develop and evaluate 3D computer models of physical objects.	Pupils will design and code a project that captures inputs from a physical device.
YEAR 7 - KEY	E-Safety Computer literacy Online threats	Computer systems Hardware and software. Data representation.	Data Representation Binary/denary conversion	Algorithms Flowchart symbols Flowcharts	Variables Operators String	Block programming with scratch

KOINONIA FEDERATION – ALL THROUGH SUBJECT MAP

THEMES / CONCEPTS	Privacy Cyber-bullying Digital footprint	Input-Process-Output cycle. Input and output devices.	Data vs. information Structured data Data types	Sequence Selection Iteration	Integer Boolean Real/float	
YEAR 7 - KEY CONTENT/ LEARNING	<p>1. Understands how to recognise and be legally and emotionally safe from threats such as grooming, sexting and cyber bullying.</p> <p>2. Understands the importance of communicating safely and respectfully online, and the need for keeping personal information private. Your online digital presence.</p> <p>3. Confidently uses PC based systems to create, rename and edit different file types.</p> <p>4. Obtains content from the world wide web using a web browser.</p>	<p>1. Classifies a range of software including operating systems, utility and application software. Explains the difference between hardware and software, and their roles within a computer system.</p> <p>2. Gives examples of how data is stored on a computer. Explains the function of the main internal parts of basic computer architecture.</p> <p>3. Outlines the concepts behind the input-process-output cycle. Recognises that a range of digital devices can be considered a computer.</p> <p>4. Recognises and can classify a range of input and output devices.</p>	<p>1. Classifies different types of data and understands how these are used in different situations.</p> <p>2. Understands the difference between data and information.</p> <p>3. Recognises that data can be structured in tables to make it useful.</p> <p>4. Understands why a computer stores data in binary</p> <p>5. Can convert denary to binary and vice versa</p> <p>6. Add two binary numbers</p>	<p>1. Defines what an algorithm is.</p> <p>2. Interprets and creates algorithms that use simple real-world sequences.</p> <p>3. Use sequence, selection and iteration in flowcharts</p> <p>4. Understand the four basic data types used in algorithms</p> <p>5. Understand what a variable is</p> <p>6. Understand how to assign and compare variables using operators</p> <p>7. Interprets and creates simple flowcharts using sequence, operators and variables.</p> <p>8. defines decomposition and abstraction</p>	<p>1. Defines what an algorithm is.</p> <p>2. Interprets and creates algorithms that use simple real-world sequences.</p> <p>3. Use sequence, selection and iteration in flowcharts</p> <p>4. Understand the four basic data types used in algorithms</p> <p>5. Understand what a variable is</p> <p>6. Understand how to assign and compare variables using operators</p> <p>7. Interprets and creates simple flowcharts using sequence, operators and variables.</p> <p>8. defines decomposition and abstraction</p>	<p>1. Create block structures for sequence, selection and iteration</p> <p>2. Move a sprite based upon user input events</p> <p>3. Move a sprite using iteration with no user input</p> <p>4. Detect collision between sprites</p> <p>5. Write a simple game which includes user input control, moving sprites and collision detection</p>
YEAR 8 - KEY	Computer systems Hardware and software. Data representation.	Data representation Concepts of number bases	Definition of network and network types.	Computational thinking Algorithms	The use of spreadsheets for data storage Create spreadsheets	The use of spreadsheets for data storage

KOINONIA FEDERATION – ALL THROUGH SUBJECT MAP

THEMES / CONCEPTS	Input-Process-Output cycle. Input and output devices.	Why we use binary. Why we use hexadecimal. Binary/denary conversions	Cloud based networking. Internet vs WWW. Network connection technologies.	Flowchart symbols Flowcharts Sequence Selection Iteration		Create spreadsheets
YEAR 8 - KEY CONTENT/ LEARNING	<ol style="list-style-type: none"> 1. Classifies a range of software including operating systems, utility and application software. Explains the difference between hardware and software, and their roles within a computer system. 2. Gives examples of how data is stored on a computer. Explains the function of the main internal parts of basic computer architecture. 3. Outlines the concepts behind the input-process-output cycle. Recognises that a range of digital devices can be considered a computer. 4. Recognises and can classify a range of input and output devices. 	<ol style="list-style-type: none"> 1. Be able to convert from denary to binary and binary to denary 2. Be able to add two 8-bit binary numbers 3. To understand why bases over 10 need symbolic representations 4. To be able to convert from hex to denary and denary to hex 5. To be able to convert from hex to binary and binary to hex 	<ol style="list-style-type: none"> 1. Define a network and know the differences between LAN and WAN 2. Understand the differences between real-client server and P2P networks 3. Understands the difference between the internet and the WWW 4. Understand how data is stored remotely on servers or cloud 5. Know the advantages and disadvantages of cloud-based systems 6. Understand different connection methods such as Bluetooth, wi-fi and ethernet 	<ol style="list-style-type: none"> 1. Defines what an algorithm is. 2. Interprets and creates algorithms that use simple real-world sequences. 3. Use sequence, selection and iteration in flowcharts 4. Understand the four basic data types used in algorithms 5. Understand what a variable is 6. Understand how to assign and compare variables using operators 7. Interprets and creates simple flowcharts using sequence, operators and variables. 8. defines decomposition and abstraction 	<ol style="list-style-type: none"> 1. Makes judgements about digital content when evaluating and repurposing it for a given audience. Recognises the audience when designing and creating digital content. 2. Undertakes creative projects that collect, analyse, and evaluate data to meet the needs of a known user group. Effectively designs and creates digital artefacts for a wider or remote audience. 3. Uses a variety of software to manipulate and present digital content: data and information. 4. Evaluates their work and makes improvements to solutions based on feedback received. 	<ol style="list-style-type: none"> 1. Makes judgements about digital content when evaluating and repurposing it for a given audience. Recognises the audience when designing and creating digital content. 2. Undertakes creative projects that collect, analyse, and evaluate data to meet the needs of a known user group. Effectively designs and creates digital artefacts for a wider or remote audience. 3. Uses a variety of software to manipulate and present digital content: data and information.

KOINONIA FEDERATION – ALL THROUGH SUBJECT MAP

						4. Evaluates their work and makes improvements to solutions based on feedback received.
YEAR 9 - KEY THEMES / CONCEPTS	LAN vs WAN Network topologies Internet protocol Common network protocols	Concepts of number bases Why we use binary. Why we use hexadecimal. Binary/denary conversions Boolean logic Truth tables Logic gates AND gate OR gate NOT gate Boolean algebra	Computational thinking Abstraction Decomposition Pattern recognition Algorithms Flowcharts Sequence Selection Iteration	Memory and storage. FDE cycle. Virtual memory.	Data types Operators Basic python syntax	Programming project
YEAR 9 - KEY CONTENT/ LEARNING	1. Know the hardware that comprises a typical LAN 2. Understand network topologies and how they affect the resilience of a network 3. Understand the concept of data transfer protocols	1. Be able to convert from denary to binary and binary to denary 2. Be able to add two 8-bit binary numbers 3. To be able to convert from hex to denary and denary to hex	1. Defines what an algorithm is. 2. Interprets and creates algorithms that use simple real-world sequences. 3. Use sequence, selection and iteration in flowcharts	1. Understand how data and instructions are stored in main memory and how instructions are fetched from memory to be processed by the CPU 2. Understand the concept of secondary	1. Know the basic data types and operators in Python 2. Demonstrate input and output and variable assignation in Python 3. Interpret and create Python programs using sequence, selection,	1. Prepare requirements for a self-determined programming project 2. Build, test and evaluate a non-trivial program (or set of programs) to fulfil the requirements

KOINONIA FEDERATION – ALL THROUGH SUBJECT MAP

	<p>4. Describe in detail how data is split into packets and transferred over a network using the internet protocol</p> <p>5. Know a range of common network protocols</p>	<p>4. To be able to convert from hex to binary and binary to hex</p> <p>5. Understand the concept of digital vs analog systems</p> <p>6. Relate real world systems to using AND, OR and NOT gates to represent possible outcomes</p> <p>7. Write truth tables for AND, OR and NOT logic gates</p> <p>8. Write logic diagrams based upon truth tables for AND, OR and NOT</p> <p>9. Write truth tables for logic circuits with more than one logic gate</p> <p>10. Draw logic circuits for truth tables representing systems with more than one logic gate</p>	<p>4. Understand what a variable is</p> <p>5. Understand how to assign and compare variables using operators</p> <p>6. Interprets and creates simple flowcharts using sequence, operators and variables.</p> <p>7. Understand the 4 computational thinking techniques</p>	<p>storage and know a range of secondary storage devices</p> <p>3. Evaluate secondary storage devices and be able to choose appropriately based upon speed, robustness, capacity and portability</p> <p>4. Understand the concept of virtual memory and explain its importance</p> <p>5. Predict possible computer systems of the future.</p>	<p>iteration, variables and operators</p> <p>4. Test trivial Python programs using trace tables</p> <p>5. Identify and fix logic and syntax bugs in Python programs</p>	<p>3. Use functions and persistence using files in a non-trivial program</p>
<p>YEAR 10 - KEY THEMES / CONCEPTS</p>	<p>Computer Systems</p> <p>Common CPU components and their functions</p> <p>Characteristics of CPU and the way they affect</p>	<p>Primary storage</p> <p>Secondary storage</p> <p>Strands of data storage</p> <p>Data storage</p> <p>Characters</p> <p>Images</p> <p>Sound</p>	<p>Searching and sorting algorithms</p> <p>Computational thinking techniques</p> <p>Designing, creating and refining algorithms</p>	<p>Variables and constants</p> <p>Data types</p> <p>Operators</p> <p>Programming constructs</p> <p>- Sequence</p>	<p>String manipulation</p> <p>File handling</p> <p>Data storage and SQL</p> <p>Arrays</p> <p>Subprograms</p> <p>Random number generator</p>	<p>Types of networks (LAN and WAN)</p> <p>Factors that affect network performance</p> <p>Client-server and P2P networks</p> <p>Network hardware</p>
